STATUS	STATE	REGION	COMPONENTS	YR ENACTED
	Colorado			
	Methane emissions from oil and gas operations must be reduced 60% below 2005 levels by 2030.			
	Oil and gas companies must find and fix methane leaks, and, where necessary, install technologies to limit or prevent emissions. These rules also require semiannual leak detection, tank controls, and performance standards for transmission. Frequent leak detection and repair (LDAR) is also required, and routine methane flaring during maintenance is prohibited.			
	Oil and gas operators must also report their emissions under the Colorado Greenhouse Gas Reporting Rule.
